Jennifer Kaplan	Alejandra Sorto

STATISTICS EDUCATION RESEARCH JOURNAL

The *Statistics Education Research Journal (SERJ)* is a peer-reviewed electronic journal of the International Association for Statistical Education (IASE) and the International Statistical Institute (ISI). *SERJ* is published twice a year and is open source.

SERJ aims to advance research-based knowledge that can help to improve the teaching, learning, and understanding of statistics or probability at all educational levels and in both formal (classroom-based) and informal (out-of-classroom) contexts. Such research may examine, for example, cognitive, motivational, attitudinal, curricular, teaching-related, technology-related, organizational, or societal factors and processes that are related to the development and understanding of stochastic knowledge. In addition, research may focus on how people use or apply statistical and probabilistic information and ideas, broadly viewed.

The *Journal* encourages the submission of quality papers related to the above goals, such as reports of original research (both quantitative and qualitative), integrative and critical reviews of research literature, analyses of research-based theoretical and methodological models, and other types of papers described in full in the Guidelines for Authors. All papers are reviewed internally by an Associate Editor or Editor, and are blind-reviewed by at least two external referees. Contributions in English are recommended. Contributions in French and Spanish will also be considered. A submitted paper must not have been published before or be under consideration for publication elsewhere.

Further information and author guidelines are available at:
<http://iase-web.org/Publications.php?p=SERJ>

Submissions

Manuscripts must be submitted by email, as an attached Word document, to co-editor Maxine Pfannkuch < m.pfannkuch@auckland.ac.nz >. Submitted manuscripts should be produced using the Template file and in accordance with details in the Guidelines for Authors on the Journal's Web page: <http://iase-web.org/Publications.php?p=SERJ>

© International Association for Statistical Education (IASE/ISI), May 2016

Publication: IASE/ISI, The Hague, The Netherlands

Technical Production: The University of Texas at El Paso, El Paso, Texas, United States of America

ISSN: 1570-1824

**International Association for Statistical Education (IASE) –
an association of the International Statistical Institute (ISI)**

President: Iddo Gal (Israel)

President-Elect: Andrej Blejec (Slovenia)

Past- President: John Harraway (New Zealand)

Vice-Presidents: Joachim Engel (Germany), Alison Gibbs (Canada), Alejandra Sorto (United States), David Stern (Kenya)

SERJ EDITORIAL BOARD

Conferences	55

EDITORIAL

Welcome to the first issue of *SERJ* for 2016. Before my discussion on the articles in this issue, there are three announcements. The first is that Joan Garfield, University of Minnesota and Tim Jacobbe, University of Florida have resigned as Associate Editors. Joan Garfield, a renowned international statistics education researcher, has been an Associate Editor of *SERJ* since its inception in 2002. Her long voluntary service to *SERJ* and many years of experience in statistics education research have been invaluable to *SERJ*. We will miss her in-depth knowledge of statistics education research. We thank Joan for all her work and unstinting support for *SERJ* and wish her a long and happy retirement. Tim Jacobbe has served three years as Associate Editor and his expertise has been highly valued. The second announcement is that Egan Chernoff (University of Saskatchewan), Leigh Harrell-Williams (University of Memphis), and Alejandra Sorto (Texas State University) kindly agreed to be Associate Editors and began serving in January 2016.

The third announcement is that this is the last issue that Larry Lesser (The University of Texas at El Paso) will edit. As Assistant Editor, Larry has spent countless hours doing the required detailed editing work and communicating with authors and editors to ensure the clarity, grammar, and referencing in every published paper is at a very high standard. We have very much appreciated his three-year commitment and service to *SERJ*. At the same time, we welcome new Assistant Editor Christine Franklin (University of Georgia), who (with Kim Love) edited one of the papers in this issue. Also, there is a call for nominations to replace me as Co-Editor of *SERJ* on 1st July 2017.

In this issue, the first article reviews the literature on learning statistical language while the second article centers on learning statistics and motivation.

Peter Dunn, Michael Carey, Alice Richardson and Christine McDonald give a comprehensive overview of the many issues teachers and students face when understanding, using and learning the language of statistics. Comprehending and communicating statistical ideas in the technical language of the discipline is paramount for development of students' reasoning processes, thinking, and conceptual understandings. The authors point out the many obstacles and challenges associated with the terms and language used in statistics. Becoming statistically literate is not easy when the precise use of statistical language can be critical for communicating information. Researchers and teachers will find this paper very useful not only for learning about how statistical language is formed from an amalgamation of words from different sources but also for thinking about how some of the identified challenges can be overcome.

Ute Sproesser, Joachim Engel and Sebastian Kuntze report on a four-lesson intervention study designed to have an impact on students' achievement and to foster self-concept and interest for statistics. As many teachers will attest, the ability to motivate student interest in a subject is key to engaging them in learning and developing their understanding of the subject. Using four treatment groups and a baseline group, they gathered pre- and post-test data from 503 grade 8 students. They concluded that it was possible to foster statistics-related self-concept and interest through learning environments characterized by student experiences of autonomy, achievement and social relations in the statistics domain. Interestingly, students perceived mathematics and statistics differently with respect to these motivational variables.
