

## VISUALISING DATA WITH DYNAMIC GRAPHICS IN EXCEL

HENDERSON, Harold

AgResearch

New Zealand

*Data Visualisation tools provide deep insight into the structure of data. Dynamic statistical graphics are now widely available in many statistical packages, and even in Excel. I will give examples of the use of dynamic statistical graphics in statistical practice using Excel. Using such techniques, the internally assessed components of NCEA statistics can be presented by students in ways which are relevant, up-to-date and easy to understand.*
